Art Unit: 1723

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Claims 1-65, drawn to filter assemblies, classified in class 210, subclass
 435.

II. Claims 66-75, drawn to a method of filtering a fluid, classified in class 210, subclass 791.

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatuses could be used to carry out another and materially different process, for example, in a process for controlling fluid flow.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains the following species of filter assemblies which correspond to the drawing Figures as follows:

<u>Species</u>	<u>Figure(s)</u>	
1	1, 4	
2	6A	
3	7	
4	8A	
5	10 A	

Art Unit: 1723

6

10B.

In addition, this application discloses the following subspecies of shearing surfaces which correspond to the drawing Figures as follows:

Species	Figure(s)	
S1	3A	
S2	3B	
S3	3C.	

This application contains claims directed to the following patentably distinct species of the claimed invention:

Claims 3, 6-24 correspond to species 1;

Claims 28 and 62 correspond to subspecies S1-S3;

Claims 29 and 63 correspond to a subspecies not shown in any of the drawing

Figures;

Claims 32, 33, 37-41 correspond to species 3;

Claims 47 correspond to species 2;

Claim 48 corresponds to a species not shown in any of the drawing Figures;

Claims 49-56 corresponds to species 4

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species (e.g., one of species 1-6) and subspecies (e.g., one of species S1-S3) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to

Art Unit: 1723

be allowable. Currently, claims 1, 2, 4, 5, 25-27, 30, 31, 34-36, 42-46, 57-61, and 64-75 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
